Diaphragm Aerators

TLD

The TLD-series is a diaphragm aerator designed for aerating wastewater or aquarium water. It operates on AC single-phase. The compact but well-built unit offers a high and stable performance, quiet operation, low energy consumption, and excellent durability. Since no oil is used even in the mechanical parts, the aerator requires no lubrication and discharges air without any contamination. A thermal protection device (except for TLD-20R) is built in the electromagnets, which ensures a safety operation.
